FOR IMMEDIATE RELEASE

SITEHAWK PROVIDES DEPARTMENT OF HOMELAND SECURITY TOP-SCREEN ASSISTANCE

Nashville, TN (November 28, 2007) - [SiteHawk](#) announces the release of a powerful cross-referenced reporting tool to assist facilities in determining if they must submit a Top-Screen report to the [Department of Homeland Security \(DHS\)](#) as required by 6 CFR Part 27, including § 27.210(a)(1)(i). SiteHawk released a preliminary reporting tool this past August. Immediately after the DHS released the final rule November 2nd and prior to it being published to the *Federal Register*, SiteHawk updated their reporting tool based on the finalized Appendix A: Chemicals of Interest list. A 60 day count-down to the due date for submittal of the Top-Screen for affected facilities began upon publishing the [Final Rule, Appendix A](#) to the *Federal Register*, which happened November 20th, 2007. "Our customers are expressing relief and gratitude that they are able to have access to such relevant information so quickly," Kim Stier, President and CEO of SiteHawk reported. "We are pleased that our customers find peace-of-mind in knowing they are able to rely on SiteHawk for timely information and expert knowledge on regulatory topics like the DHS Appendix A: Chemicals of Interest list."

SiteHawk customers are able to generate a comprehensive report in seconds, which jump starts their reporting process and puts them ahead of the curve. Because SiteHawk indexes pertinent data fields for each material, facilities can efficiently determine which materials are, or contain constituents that are, subject to the Appendix A: Chemicals of Interest list. SiteHawk also provides relevant information like threshold quantities related to the type of threat (theft, security, release, etc.). In addition to supplying the necessary information, the SiteHawk report has the user-friendly layout and sorting options users have come to expect from SiteHawk.

For more information regarding the DHS Top-Screen requirements, see the article on our website, ["Protecting Our Homeland – Is Your Facility High-Risk?"](#) by Ruth Mayo, SiteHawk Regulatory Compliance Specialist.

SiteHawk understands the burden chemical data management places on the EH&S departments and provides real-time solutions. SiteHawk seeks to provide simpler, more efficient chemical data management and cost-effective resources to assist EH&S professionals in realizing their MSDS vision.

If you would like more information about this topic, or to schedule an interview with Kim Stier, please contact Carma Roetcisoender at 615/459.0064x21 or email: carma@sitehawk.com. Additional information related to SiteHawk leadership can be found at www.sitehawk.com/about.
