

CASE STUDY

"The support for the initial inventory was great, material approvals are now hassle-free and printing labels is fantastic. But you can't beat the quick response of having the SDS immediately available and searchable in the system."

JOHN DRABIC

Sr. Safety Specialist, NAES Corporation

PROJECT OVERVIEW

Northampton Generating Co. L.P. needed to replace hard-copy SDS notebooks with an electronic system that could provide immediate access to safety data sheets and support customized material approval processes. With SiteHawk Communicator, Northampton Generating Co. improves chemical management and has a consistent process for labeling secondary containers.

THE COMPANY

Northampton Generating Co. L.P. needed to replace hard-copy SDS notebooks with an electronic system that could provide immediate access to safety data sheets and support customized material approval processes. Utilizing SiteHawk Communicator *Professional* edition, Northampton Generating Co. is able to improve chemical inventory management and have a consistent process for labeling secondary containers.

Northampton Generating Co. L.P.

THE CHALLENGE

Northampton Generating Co. needed a solution that would assist in streamlining their safety and compliance programs across their facility. They wanted to eliminate paper-based and manual processes to ease employee's ability to search and provide instant access to safety data sheets. Furthermore, they required a system that could easily create secondary container labels directly within the system. Their final requirement was to have a solution to build a customized material approval process to further enhance control of chemical inventories.

THE SOLUTION

Northampton Generating Co. chose SiteHawk's combined SDS management and chemical inventory services because SiteHawk was able to meet all of their chemical management needs. Northampton first took advantage of SiteHawk's chemical inventory services. SiteHawk's chemical inventory specialists were able to go on-site and identify more than 340 chemicals within the facility. After Northampton reconciled their chemical inventory, they were able to leverage SiteHawk's material approval tool to create a customized material approval process to automate workflows and better control inventory across 35 specific chemical areas. After approval from the appropriate safety and environmental managers, the safety data sheet is instantly available for employees to use as reference or to search.
