

# CASE STUDY

*"SiteHawk makes things easier for our workers. The SiteHawk system is user-friendly and easy to learn. Plus, we are now better organized by facility, right down to the chemical area."*

EHS Specialist  
Franklin Precision Industry Inc.

## PROJECT OVERVIEW

Franklin Precision Industry, Inc. needed a more efficient means to manage their chemical information and SDS management program. Utilizing SiteHawk Express and SiteHawk's Inventory Services, Franklin Precision is able to replace manual processes, while kick-starting and re-organizing their electronic SDS management program.

## THE COMPANY

Franklin Precision Industry is a QS-9000 and ISO-14000 registered supplier of air induction and emission components committed to meeting the demand for high precision value. A strong commitment to engineering and innovative manufacturing methods makes FPI a leader in product quality, cost and delivery.

## THE CHALLENGE

Franklin Precision needed a solution that could easily and quickly be implemented to replace previous manual/paper-based processes. The previous paper-based system was not easily controlled because multiple process and methods were in place for managing and updating safety data sheets. Franklin Precision also required a complete chemical inventory audit to be performed. Additionally, Franklin Precision wanted a system that was easy for employees to use, but also robust enough to manage unique chemical areas and assist with regulatory reporting.

## THE SOLUTION

Franklin Precision took a 2-step approach by first engaging SiteHawk's Inventory Services team to provide a thorough inventory of the company's on-site chemicals to be reconciled with chemical information and SDSs. After the inventory was completed, Franklin Precision implemented SiteHawk Communicator to meet all of their chemical data management requirements. During implementation, Franklin Precision was able to consolidate processes across 37 unique chemical areas within their organization, removing time-intensive and costly manual processes.

By combing SiteHawk's software and services, Franklin Precision has streamlined their SDS management program, updated their inventory, and can now efficiently manage 350 plus safety data sheets within one centralized platform. SiteHawk was also able to provide comprehensive training and support materials enabling Franklin Precision's employees to be up and running in weeks.

"SiteHawk makes things easier for our workers. The SiteHawk system is user-friendly and easy to learn. Plus, we are now better organized, right down to the chemical area," stated Tyler Haley, EHS Specialist for Franklin Precision.

In addition, the immediate operational benefits provided by SiteHawk supports Franklin Precision's goal of leveraging chemical data for use in their ISO-14000 environmental management system.
