

## ADDITIONAL PROPERTIES

**Capture unlimited material data in one location.**

SiteHawk Communicator leverages Chemical Data Intelligence and innovative technology to provide a full-service chemical data management solution. The Additional Properties functionality enables users to create configurable fields associated with materials within a SDS Notebook to add user-defined property fields and track information specific to a corporation or an individual facility.

Additional Properties provides an innovative way to store material data. The functionality offers 14 different types of fields and 8 different scopes for applying each field type ... equalling 112 different ways to capture material data, With the ability to create an infinite number of any combination of these ways, users have endless possibilities to the amount or method of material data capture within SiteHawk.

Additional Properties are visible in material summaries, searchable via *QuickSEARCH* and included in reporting. Additional Properties fields types can include dates, images, links, text and checkboxes, and multiple values can be saved for each properties to enable users to consolidate chemical data in a single accessible location.

- ✓ Associate corporate or facility-specific data with materials on site.
- ✓ Include custom fields and site-specific identifiers in reports and search capabilities.
- ✓ Connect materials to multiple systems by applying common identifiers (such as part numbers) in a single configurable field.
