

## CHEMICAL INVENTORY TRACKING

**Simplify quantity management processes without compromising accuracy.**

SiteHawk Communicator leverages SDS data and integrates systems to provide a full-service chemical data management solution. Chemical Inventory Tracking (CIT) seamlessly integrates with SiteHawk Communicator to transactionally track materials and provide data used for reporting.

Use CIT to receive and track one or many materials simultaneously, providing real-time updates for quantities in exportable formats. Create and manage Lots and export quantity information in spreadsheets for reporting while using barcodes to import and track material data within the application.

SiteHawk CIT helps organizations streamline quantity management and reporting processes:

- ✓ Receive inventory quantities by facility or chemical areas and track quantities by Usage, Spill, Transfer and Waste.
- ✓ Generate lists and reports including total quantities and transactions associated with materials.
- ✓ Alleviate the burden of regulatory reporting calculations.
