

MAPS with MATERIAL APPROVAL

Speed. Simplicity. Accuracy.

SiteHawk Communicator leverages SDS data and integrates systems to provide a full-service chemical data management solution. SiteHawk's MAPS (Material Analysis Profiling System) and Material Approval integration provides efficient and user-friendly functionality to save time and cost in Material Approval processes.

SiteHawk MAPS incorporates regulatory lists or custom lists (such as banned chemicals) as a step in the Material Approval process. These lists automate the first step of the process and can automatically deny or approve the step based on these lists. In addition, once a material is approved, the material can automatically submit to SiteHawk Service Request to be added to the user's SDS catalogs and/or facility-specific SDS Notebook(s).

Streamline processes by integrating MAPS with Material Approval:

- ✓ Support operational efficiency and regulatory compliance by uploading regulatory or custom lists and "map" lists to chemicals by CAS number.
- ✓ Drive company compliance and product stewardship regarding hazardous materials and alleviate the burden of reviewing lists by creating an automated Material Approval step to deny banned chemicals.
- ✓ Save valuable time by automatically submitting approved materials to SiteHawk Service Request.
