

## Reporting

Leverage chemical data intelligence to promote product stewardship.

SiteHawk Communicator leverages chemical data and regulatory content to provide innovative reporting capabilities throughout the system. Report criteria can be saved for future use, and results can be viewed immediately in the application and exported to spreadsheets.

### Standard Reports

SiteHawk's Standard Reporting tools enable users to configure reports from within SDS Notebooks. These reports include Material, Ingredient, Revision Date, Vendor, Chemical Area, GHS Compliance and Audit Reports.

### Advanced and Regulatory Reports

SiteHawk offers a Material Properties Report that enables users to generate a custom report with individual properties cross referenced against the SDSs in user Notebooks. In addition, SiteHawk supports over 225 international, federal, state and local regulatory lists that cross reference against SDS data to help organizations maintain compliance with regulatory reporting requirements. This content also generates regulatory impact analysis of each material. Regulatory and custom lists can integrate with Material Approval to save time and effort by automating approval workflow processes.

### Environmental Reports

SiteHawk supports environmental reporting including advanced threshold reports supporting Sara Title III Lists. SiteHawk provides a full Tier II Wizard along with TRI Reporting, threshold worksheets (OSHA PSM, EPA RMP, DHA COI and Form R requirements) and max/avg/daily amounts including the location and percentages of the material.

- ✓ Utilize chemical data intelligence to generate and export multiple reports within a single platform.
- ✓ Cross reference up to 225 regulatory lists or imported custom lists to maintain compliance and reduce operational risk.
- ✓ Elevate product stewardship by integrating chemical data and environmental reporting tools.
