

### SDS Version Management Update and Verification Services

Automated updates to utilize the latest chemical data.

SiteHawk provides ongoing Verification and Update Services to help customers maintain compliance with the latest data and most recently revised SDS documents. SiteHawk's standard review policy ensures that SiteHawk reviews the active SDSs in each SDS Notebook at least every 24 months (compared to the industry-standard of 36 months). For SDSs not verified as the most current within the past 24 months, SiteHawk contacts the manufacturer to obtain the most current SDS.

When a new or revised version is obtained, the previous version is archived. Archives are kept at no additional cost and can be accessed at any time to support regulatory version history and archiving requirements. Users can utilize SiteHawk's search and reporting features to view verification dates or a list of all new or updated SDS documents within a facility.

If a customer receives a new or revised SDS from a manufacturer, users may easily submit the SDS to SiteHawk at any time using the web-based Service Request. In addition, if a newer version of any SDS comes into the SiteHawk Master Catalog from across thousands of SiteHawk customer sites or manufacturers, SiteHawk indexes the SDS and publishes it, updating customer Notebooks with the newest SDS data.

- ✓ Manage updated GHS-compliant data with automated 24-month Verification and Update Services.
- ✓ Provide access to version archives to meet SDS retention and access requirements.
- ✓ Submit new or revised SDSs to SiteHawk with an easy-to-use web-based Service Request.
