

SERVICE REQUEST

Web-based SDS submission delivers immediate access to new material data.

Receive a new SDS from a manufacturer? Easily submit new or revised documents using Service Request to provide immediate access to chemical data for materials arriving on site. Service Request is a user-friendly, web-based form that captures critical data and adds materials directly to your SDS Notebooks. Once a material is submitted, SiteHawk evaluates the SDS to distinguish whether it is a duplicate, new or revised SDS and, if new or revised, automatically indexes the SDS and adds the data to your SiteHawk Notebook.

Users can review all submissions, including status and submission results. In addition, SiteHawk's configurable Material Approval workflows enable users to auto-submit approved materials to SiteHawk, automating compliance and making Service Request a simple, quick way to add and access materials to your SDS Notebooks.

- ✓ Maintain compliance by submitting all new or revised SDSs and providing immediate access to new chemical data.
- ✓ Consolidate data by designating materials to chemical areas, assigning Additional Properties or Synonyms and including attachments with SDS submission.
- ✓ Integrate Service Request with Material Approval workflows to auto-submit approved materials to SiteHawk.
