

The Power of Data

Approximately 77% of companies use paper-based systems for chemical compliance. This method of data management is time consuming, provides limited access to data (inviting regulatory risk), is costly and locks static data within the pages of a document. SaaS data management solutions drive safety and compliance by providing online systems to collect, organize, activate and integrate your chemical data.

What Is SiteHawk?

As the global leader in Chemical Data Intelligence and compliance solutions, our SaaS software and services deliver a complete approach to SDS management, providing data, intelligence and reporting to support safety, compliance and risk avoidance. Organizations in virtually every industry worldwide utilize SiteHawk solutions to manage their hazard communication programs, meet EHS compliance and product stewardship initiatives, manage chemical inventories and data, publish safety data sheets and promote workplace safety.

We Know Data

SiteHawk offers a full-service approach and innovative, powerful technology to streamline data processes and provide an effective, intelligent and user-friendly solution to chemical data management. Leveraging decades of industry expertise and experience, our product and services provide robust and trustworthy content, including an indexing process that extracts up to 240 data points from each SDS. SiteHawk activates this chemical data, providing the tools needed to elevate data beyond compliance—to drive business innovation.

- Provide quick access to SDSs in a user-friendly online system with extensive search and reporting features.
- Know what materials are in chemical areas, utilize configurable material approval workflows and incorporate real-time chemical inventory tracking.
- Maintain regulatory compliance by engaging pre-populated labeling features and over 225 regulatory lists with robust reporting capabilities.
- Access the latest SDS data with automated SDS Verification and Update Services.
- Integrate disparate systems with data import/export capabilities.
- Utilize a full-service solution with SDS Authoring and On-site Inventory Services.
- Harness data for environmental reporting and Product Stewardship initiatives.

Elevate EHS

SiteHawk is more than a SDS management tool; we provide data intelligence and content for use outside of EHS teams. Successful EHS industry leaders are shifting from a focus on compliance to discovering ways to leverage chemical data and strategically support corporate initiatives. By reducing risk, lowering costs, promoting productivity and driving product stewardship, EHS leaders use chemical data to align with enterprise objectives.

Move the needle from tactical reaction to strategic development at all levels of an organization: harness intelligent chemical data to drive business development—real business change can start today!

We know data. Let us show you how to leverage yours.
